

CLAIM AMENDMENTS

Claims 1-91 (Canceled).

Claim 92 (new): A method of providing distance-treatment for registered users through Internet, comprising the steps of:

(a) establishing an information connection system comprising a computer, a visual signal producer and an audio signal producer, wherein said information connection system is arranged to be capable of communicating with a service provider through said Internet;

(b) requiring said registered user to login said service provider through said Internet, wherein each of said registered user is able to present a diagnosis record and a health information profile for said information connection system;

(c) communicating a treatment request to said information connection system on the basis of said diagnosis record of said registered users through said Internet, wherein after said verification of said registered user, said service provider recognizes said registered user and admits said registered user to make said treatment request to said service provider at said information connection system through said Internet, wherein in responsive to said treatment request of said registered user, said service provider sends said respective registered user a treatment page which may include a list of said health problems and diseases that said registered user suffers, treatment opinions from doctors, recommendation of beneficial foods and activities for each of said listed health problems and diseases of said registered user, recommended biological treatments with respect to said listed health problems and diseases that said registered user suffers respectively, and information of suggested treatment instrument for executing each recommended biological treatment;

(d) based on said treatment request and said health information profile for said registered user, formulating a treatment information data package from a treatment information database provided by said service provider;

(e) commanding said computer to perform treatment by digital treatment signals based on said treatment information data package, wherein said treatment is initiated and operated by said information connection system on said registered user,

wherein said treatment is selected from a group consisting of an audio and visual treatment to said registered user via said audio device and said monitor respectively, and is based on said treatment data package, wherein said digital treatment signals are decoded into analog treatment signals which are sent to said computer to program and control said treatment of said registered user when said treatment instrument is an analog type treatment instrument; and

(f) sending a responsive health information of said registered user to the service provider for controlling and adjusting properties of said digital treatment signals of said treatment information data package; and

(g) communicatively connecting a treatment instrument with said information connection system, wherein said treatment instrument further includes at least one addition treatment option as an additional treatment for said registered user apart from said audio and visual treatment.

Claim 93 (new): The method, as recited in claim 92, further comprising a step, before said step (a), of establishing said treatment information database and a health information database for said service provider, wherein said treatment information database includes a plurality of treatment information with respect to different kinds of classified health problem, wherein said health information database includes said health information profiles established for said registered users respectively, wherein each of said health information profiles includes a personal general information and a personal health information of said respective registered user.

Claim 94 (new): The method, as recited in claim 93, wherein said personal general information includes a specific user ID and a specific password registered by each of said registered users and a specific passcode assigned to each of said registered users by said service provider.

Claim 95 (new): The method, as recited in claim 94, wherein said personal health information of each of said registered users includes personal physical information and a recent body test record of said respective registered user, and said health information profile of each of said registered users further comprises a diagnosis file recording a personal diagnosis information of said respective registered user.

Claim 96 (new): The method, as recited in claim 95, wherein the step (a) further comprises a step of registering said treatment instrument in said service provider

so as to make a corresponding record in said health information profile of said respective registered user.

Claim 97 (new): The method, as recited in claim 93, wherein said step (b) comprises the steps of:

(b-1) receiving a login request from said information connection system of said registered user;

(b-2) sending a login page to said information connection system of said registered user to collect said user ID, said password and said passcode of said respective registered user;

(b-3) authorizing said received user ID, password and passcode from said registered user by checking against all said personal general information of said health information profiles of said health information database; and

(b-4) sending said member page to said registered user when said user is verified as said registered user in record, wherein said member page is a tailored web-pages for allowing said registered user to access and amend said health information profile thereof, informing said current health condition of said registered user based on said health information profile of said registered user, providing list of health problems and diseases of said registered user, and placing said treatment request.

Claim 98 (new): The method, as recited in claim 96, wherein said step (b) comprises the steps of:

(b-1) receiving a login request from said information connection system of said registered user;

(b-2) sending a login page to said information connection system of said registered user to collect said user ID, said password and said passcode of said respective registered user;

(b-3) authorizing said received user ID, password and passcode from said registered user by checking against all said personal general information of said health information profiles of said health information database; and

(b-4) sending said member page to said registered user when said user is verified as said registered user in record, wherein said member page is a tailored web-pages for allowing said registered user to access and amend said health information profile thereof, informing said current health condition of said registered user based on said health information profile of said registered user, providing list of health problems and diseases of said registered user, and placing said treatment request.

Claim 99 (new): The method, as recited in claim 97, wherein said step (d) comprises the steps of:

(d-1) selecting said particular health problem and disease to be treated from said list of said health problems and diseases by said registered user;

(d-2) enabling said registered user to select said specific recommended biological treatment with respect to said selected health problem or disease as said primary treatment;

(d-3) calling said personal general information and personal health information of said health information profile of said registered user from said health information database to reference said specific recommended biological treatment selected by said registered user;

(d-4) selecting, by said service provider, said specific treatment information data package from said treatment information database regarding to said selected recommended biological treatment and said health information profile of said registered user, wherein said treatment information data package contains said digital treatment signals adapted for controlling said specific treatment instrument connected to said information connection system of said registered user; and

(d-5) sending said treatment information data package to said information connection system of said registered user through said Internet so as to transmit said digital treatment signals to said information connection system for controlling said treatment instrument.

Claim 100 (new): The method, as recited in claim 98, wherein said step (d) comprises the steps of:

(d-1) selecting said particular health problem and disease to be treated from said list of said health problems and diseases by said registered user;

(d-2) enabling said registered user to select said specific recommended biological treatment with respect to said selected health problem or disease as said primary treatment;

(d-3) calling said personal general information and personal health information of said health information profile of said registered user from said health information database to reference said specific recommended biological treatment selected by said registered user;

(d-4) selecting, by said service provider, said specific treatment information data package from said treatment information database regarding to said selected recommended biological treatment and said health information profile of said registered user, wherein said treatment information data package contains said digital treatment signals adapted for controlling said specific treatment instrument connected to said information connection system of said registered user; and

(d-5) sending said treatment information data package to said information connection system of said registered user through said Internet so as to transmit said digital treatment signals to said information connection system for controlling said treatment instrument.

Claim 101 (new): The method, as recited in claim 99, wherein said step (f) comprises the steps of:

(f-1) detecting current health information of said registered user during said biological treatment;

(f-2) sending said detected current health information to said information connection system as said responsive health information through said Internet;

(f-3) feeding said responsive health information back to said service provider from said information connection system through said Internet;

(f-4) evaluating said digital treatment signals of said treatment information data package sent to said information connection system of said registered user with respect to said received responsive health information;

(f-5) adjusting said digital treatment signals of said treatment information data package to modified treatment information data package which contains updated digital treatment signals; and

(f-6) sending said modified treatment information data package to said information connection system of said registered user through said Internet so as to transmit said updated digital treatment signals to said information connection system to update said control of said computer such that said current health information is continuously feeding back to said service provider so as to render said biological treatment becoming a live-treatment that said digital treatment signals of said treatment information data package is controlled and adjusted correspondingly through said Internet so as to provide a better and more effective primarily audio and visual treatment results.

Claim 102 (new): The method, as recited in claim 100, wherein said step (f) comprises the steps of:

(f-1) detecting current health information of said registered user during said biological treatment;

(f-2) sending said detected current health information to said information connection system as said responsive health information through said Internet;

(f-3) feeding said responsive health information back to said service provider from said information connection system through said Internet;

(f-4) evaluating said digital treatment signals of said treatment information data package sent to said information connection system of said registered user with respect to said received responsive health information;

(f-5) adjusting said digital treatment signals of said treatment information data package to modified treatment information data package which contains updated digital treatment signals; and

(f-6) sending said modified treatment information data package to said information connection system of said registered user through said Internet so as to transmit said updated digital treatment signals to said information connection system to update said control of said computer such that said current health information is

continuously feeding back to said service provider so as to render said biological treatment becoming a live-treatment that said digital treatment signals of said treatment information data package is controlled and adjusted correspondingly through said Internet so as to provide a better and more effective primarily audio and visual treatment results.

Claim 103 (new): The method, as recited in claim 101, wherein after said step (f-1) and before said step (f-2), said current health information detected are analog signals which are converted into digital signals of said responsive health information for transmitting back to said service provider through said Internet.

Claim 104 (new): The method, as recited in claim 102, wherein after said step (f-1) and before said step (f-2), said current health information detected are analog signals which are converted into digital signals of said responsive health information for transmitting back to said service provider through said Internet.

Claim 105 (new): The method, as recited in claim 103, wherein said responsive health information of said registered user is obtained by requesting said registered user to input said responsive health information, including a feeling, progress and symptom of said registered user, so as to control and adjust said digital treatment signals of said treatment information data package to be sent from said service provider to said information connection system of said registered user.

Claim 106 (new): The method, as recited in claim 104, wherein said responsive health information of said registered user is obtained by requesting said registered user to input said responsive health information, including a feeling, progress and symptom of said registered user, so as to control and adjust said digital treatment signals of said treatment information data package to be sent from said service provider to said information connection system of said registered user.

Claim 107 (new): A system of providing distance-treatment for registered users through Internet, comprising:

a service provider providing a treatment information database and a health information database, wherein said treatment information database includes a plurality of treatment information with respect to different kinds of classified health problem and said health information database includes health information profiles established for said registered users respectively, wherein each of said health information profiles includes a

personal general information and a personal health information for said respective registered user;

an information connection system comprising a monitor and a computer adapted to be operated by said registered user; and a network networking said information connection system with said service provider for data communication through said Internet, wherein said computer and said monitor are arranged to initialize a primary treatment for said registered user in an audio and visual format,

wherein a treatment information data package sent from said service provider via said information connection system through said Internet to provide digital treatment signals to control said treatment, wherein said treatment information data package is selected from said treatment information database based on a treatment request sent from said information connection system to said service provider and said health information profile of said registered user in said service provider,

wherein a responsive health information of said registered user is fed back to said service provider for controlling and adjusting properties of said digital treatment signals of said treatment information data package to be sent from said service provider to said information connection system of said registered user, wherein when a current health information of said registered user is detected during said biological treatment, said detected current health information is sent to said information connection system as said responsive health information such that said responsive health information is fed back to said service provider from said information connection system through said Internet, wherein said digital treatment signals of said treatment information data package is evaluated and sent to said information connection system of said registered user with respect to said received responsive health information, wherein said digital treatment signals of said treatment information data package is then adjusted to modified treatment information data package which contains updated digital treatment signals, wherein said modified treatment information data package is sent to said information connection system of said registered user through said Internet so as to transmit said updated digital treatment signals to said information connection system to update said primary treatment,

a decoder connected between said information connection system and said treatment instrument which is an independent analog instrument, wherein said decoder converts said digital treatment signals received by said information connection system

from said service provider to respective analog signals to control said treatment of said treatment instrument; and

at least one treatment instrument communicatively connected with said information connection system which is arranged to provide additional treatment to said registered users apart from said primary treatment in said visual and audio format.

Claim 108 (new): The system, as recited in claim 107, wherein said service provider comprises a Web Server, said information connection system comprises a personal computer and said network is an Internet which is a data transmission network connecting said service provider and said information connection system.

Claim 109 (new): The system, as recited in claim 108, wherein said treatment instrument comprises a power source and an information input connection, and said decoder is an internal decoder installed in said information connection system and provides a data outlet port to be connected to said information input connection of said treatment instrument.

Claim 110 (new): The system, as recited in claim 108, wherein said decoder is an external decoder physically connected between said information connection system and said treatment instrument.

Claim 111 (new): The system, as recited in claim 107, wherein said treatment instrument is an electrical acupuncture device for operating electrical acupuncture treatment as said additional treatment.

Claim 112 (new): The system, as recited in claim 109, wherein said treatment instrument is an electrical acupuncture device for operating electrical acupuncture treatment as said additional treatment.

Claim 113 (new): The system, as recited in claim 107, wherein said treatment instrument is an electromagnetic wave generator for producing electromagnetic waves with a predetermined frequency, ranging from 1Hz to 530,000 GHz, and intensity, ranging from 1mV to 10mV as providing said additional treatment.

Claim 114 (new): The system, as recited in claim 109, wherein said treatment instrument is an electromagnetic wave generator for producing electromagnetic waves

with a predetermined frequency, ranging from 1Hz to 530,000 GHz, and intensity, ranging from 1mV to 10mV as providing said additional treatment.
